

# IMAGE SURFACE DATASHEET

## ImagePro

### PERFORMANCE DATA

Image Professional from DT Screens has been created to offer the highest possible image fidelity whilst still offering the robust construction of a knitted image surface.

Image Professional is a multi-layer surface with tightly knitted surface core with a dense black coating applied to the rear side delivering perfect flatness and uniformity and an outstandingly consistent spectral response.

ImagePro is a near perfect Lambertian diffuser delivering exceptional uniformity across the image regardless of viewing angle or position of the projector. Along with the very large maximum size this makes ImagePro ideal for advanced commercial applications as well as high performance home cinema.

ImagePro has been carefully engineered to deliver the highest possible image performance with full compatibility with latest video standards such as 4K resolution and Rec2020 colour space.

### KEY DATA

Material Type:	Front Projection
Maximum Size:	5m x 50m Seamless
Peak Gain:	0.93
Half Gain:	Lambertian Diffuser
Minimum Throw Distance:	No Minimum
Edge Blending Properties:	Excellent
